JULIETTE ARMAND

OUR PATH IN TIME

- *Juliette Armand*

Our Personal Start

The company was established in 1992, when we - chemists Ioulia Armagou and Mihalis Papaefstratiou - decided to become involved in the beauty industry, to explore new formulas and to present our personal values to laboratories. That is how Juliette Armand The Personal Professional Cosmetics came into being, in order to create innovative cosmetics, based on scientific research.

Our Professional Way

Our activity focused on trying to obtain maximum efficiency formulations, in order to meet the high standards of professional skin care.

Our Professional Reputation Internationally

The Juliette Armand brand name and the Elements, Skin Boosters and SunFilm series have gained a strong position at beauty centres and are already present in 28 countries around the world.

Our Professional Investment

Thanks to our success, our company now owns a vertical production unit in Athens, located at a state of the art facility. We have invested in advanced technological equipment and highly trained personnel, and have obtained international certifications based on the stringent standards.

(EN ISO 22716: 2007 No.: 03413005, EN ISO 9001: 2008 No.: 010140226, EN ISO 13485: 2012 No.: 01213013)

Our Personal Determination

Since 1992, science has changed dramatically and the beauty industry now has to meet particularly demanding requirements. We continue and persevere as passionately as before in trying to find the next formula, the next formulation, the next innovation.

Ioulia Armagou

Chemist, President of Juliette Armand

AMESON

SKIN MEDICAL SERIES

Science is taking us forward

After 23 years of research, development and production of professional-quality cosmetics, we announce the **AMESON Skin Medical Series**, bringing all the benefits of science to medical aesthetic products.

The name of the AMESON range, inspired by the Greek word AMESOS ('immediately'), underlines our commitment to medical aesthetic skin care with IMMEDIATE results.

Hyaluronic acid, an ingredient which is a source of inspiration for us, is the starting-point and foundation stone of the entire **AMESON** range.

AMESON MESOTECH

HIGH-END MESOTHERAPY SERIES

Hi-tech MESOTHERAPY products with a wide range of **professional solutions** for **targeted** and personalised skin care.

Raw materials with state of the art technology for mesotherapy

Hyaluronic acid

Source of inspiration and starting point of the whole AMESON series.

Vitamin C (AA2G)

In stabilised form with a comparative superiority in terms of efficiency.

Biomimetic Peptides

The most advanced raw materials technology is applied for the biomimetic effects in skin care, also having an accelerator effect on active ingredients.

BIOGENIC CAFFEINE (alcohol free)

Usability on the area around the eyes as well, at a maximum concentration of up to 40%.

Specialized mesotherapy formulas and protocols.

• AA2G 20% • DMAE 4% • BIOGENIC CAFFEINE 40%

Specialized mesotherapy formulas and protocols.

Maximum safety and efficiency in anti-ageing, regeneration, whitening, slimming and cellulite treatment.

Proven efficiency

Published clinical studies of the ingredients.

AMESON MESOTECH

HIGH-END MESOTHERAPY SERIES

AMESON MESOTECH series includes sterile Mesotherapy products, consisting of either one active ingredient or a cocktail of active ingredients.

MESOTECH products are available in 5 or 7 ml vials, in a packaging of 5 or 10 vials.

The series includes:

- **9 products for the face** (blue)
- **3 products for the face and body** (grey)
- **2 products for the body** (burgundy)
- **2 products Mesotherapy After**

A powerful combination of CALMING & REPAIR effects for a better recuperation after the mesotherapy protocols.

The Juliette Armand's Applied Research and Development Department supports our collaborators with recommended mesotherapy protocols for the face and body.

AMESON MESOTECH products are recommended for external use and are compatible with:

- ELECTROPORATION
- ULTRASOUND
- IONTOPHORESIS
- MICRONEEDLING (Microroller, Micropen)

MESOTECH
REJUVIN

Injektion

AMESON MESOTECH FACE

HYAL 1%

ACTION

Hydration, wrinkle smoothing, tightening, glow enhancement

DESCRIPTION

Hyaluronic acid of biotechnological origin, Medium Molecular Weight (MMW) (1300-1800KDa), at a concentration of 1%, with a wide range of effects on the skin.

The basic function of the specific hyaluronic acid structure on the skin is to create a 'hyaluronic acid film' on the epidermis, reducing transdermal water loss and thus helping to hydrate the horny layer.

The **hyaluronic acid** as a mesotherapy product significantly increases skin water content.

At the same time, it reduces irritation and the negative effects of the environment on the skin.

Indications

Dehydrated skin,
fine wrinkles, loss of
firmness and skin
volume, dull skin

Packaging

5 vials of 5 ml

HYAL 2%

ACTION

Ενυδάτωση, τόνωση, λείανση ρυτίδων, λάμψη

DESCRIPTION

Hyaluronic acid of biotechnological origin, Low Molecular Weight (LMW) (150-1300KDa), at a concentration of 2%, with a wide range of skin effects.

The specific molecular structure of hyaluronic acid penetrates into deeper skin layers with a key action of increasing the water content of the skin.

As an hydrophilic structural polysaccharide, **hyaluronic acid** has the ability to bind water up to 1000-fold of its weight.

At the same time it improves intracellular communication, reduces oxidative stress and adjusts skin oiliness through an immune reaction mechanism.

Indications

Dehydrated skin,
wrinkles, loss of
firmness, dull skin,
small superficial scars

Packaging

5 vials of 5 ml

HYAL 3.5%

ACTION

Hydration, wrinkle smoothing, tightening, rejuvenation

DESCRIPTION

Hyaluronic acid of biotechnological origin, Low Molecular Weight (LMW) (150-1300kDa), at a concentration of 3.5%, with a wide range of skin effects. The specific molecular structure of hyaluronic acid penetrates into deeper skin layers with a key action of increasing the water content of the skin.

As an hydrophilic structural polysaccharide, **hyaluronic acid** has the ability to bind water up to 1000-fold of its weight.

At the same time it improves intracellular communication, reduces oxidative stress and adjusts skin oiliness through an immune reaction mechanism.

Indications

Dehydrated skin, deep wrinkles, dull skin, loss of skin firmness and volume, small superficial scars, looseness

Packaging

5 vials of 5 ml

AA2G 20%

ACTION

Antioxidant activity, UV protection, rejuvenation, tightening, glow enhancement

DESCRIPTION

Natural vitamin C (ascorbic acid) in a stabilised molecular structure with glucose (L-Ascorbic Acid-2 Glucoside), at a concentration of 20%.

When AA2G comes into contact with skin, the α -glucosidase enzyme of the epidermis cleaves the bond of vitamin C with glucose and induces a gradual release of vitamin C.

The specific molecular structure of AA2G protects vitamin C from oxidation and its mode of gradual release provides higher efficiency in its proven effects.

It suppresses melanin formation in melanocytes and decreases the amount of pre-existing melanin. It promotes collagen formation in fibroblasts. It reduces free radicals, erythema and swelling caused to the skin by sunlight. It reduces expression lines and wrinkles.

Indications

Photoageing, wrinkles, fine lines, loss of firmness, melasma, skin spots and freckles, dull skin, skin roughness, smokers

Packaging

5 vials of 5 ml

ARGIRELINE 10% - LEUPHASYL 10%

Indications

Fine lines and expression wrinkles (forehead, eye area, lip contour)

Packaging

5 vials of 5 ml

ACTION

Reduces expression wrinkles

DESCRIPTION

An Argireline-Leuphasyl peptide cocktail that reduces expression wrinkles, inhibiting the contraction tension of muscles.

The action of Argireline does not intend to 'immobilise-paralyse' the muscles, like conventional 'botox' treatments, but it 'relaxes' the muscles.

Argireline destabilises the SNARE protein, whose action is vital for the release of neurotransmitters conveying the signal for muscle contraction. As a result of this mechanism of action, muscle contractions are limited and expression lines and wrinkles are softened.

Leuphasyl is a pentapeptide that mimics the action of enkephalin. It binds to the enkephalin receptor and closes calcium channels maintaining the neurons in 'resting phase', reducing muscle contractions and preventing the formation of lines and wrinkles.

It has been demonstrated in vitro that the synergistic action of the Argireline-Leuphasyl peptides presents superior efficiency compared to their individual use.

MATRIXYL 3000 10% - ARGIRELINE 10%

Indications

Photoageing, fine wrinkles and expression lines, deep wrinkles, looseness

Packaging

5 vials of 5 ml

ACTION

Reduction of wrinkles, tightening, remodelling

DESCRIPTION

A Matrixyl 3000 and Argireline peptide cocktail, that provides versatile remodelling and efficiently reduces wrinkles.

Matrixyl 3000 is a combination of the oligopeptides Pal-GHK (Palmitoyl-Gly-His-Lys) & Pal-GQPR (Palmitoyl-Gly-Gln-Pro-Arg), that act as messenger molecules by stimulating the macromolecular formation of extracellular material.

These peptides bind to the cell membrane and activate processes aiming to reduce wrinkles, improve skin texture, and increase collagen and fibronectin formation.

The action of Matrixyl 3000 is combined with the action of **Argireline**, and by preventing the output of neurotransmitters from the cells, this results in a decrease of muscle contraction and expression wrinkle formation, with excellent anti-wrinkle results.

REJUVIN

Indications

Dehydration, dry & dull skin, photoageing, deep wrinkles and fine lines, skin roughness, loss of skin firmness and volume

Packaging

5 vials of 5 ml

ACTION

Hydration, remodelling, tightening, reduction of wrinkles

DESCRIPTION

The cocktail contains MMW hyaluronic acid, 5 biomimetic peptides (Oligopeptide-20, -24, -34, -51 & Decapeptide-4), 3 vitamins (AA2G, PP, Panthenol) DNA-RNA complex, Arginine, as well as the hydrating agent Unimoist U-125NP.

Hyaluronic acid binds strongly to water, thus hydrating the skin and offering volume, as well as 'smoothing' the wrinkles.

Oligopeptide-20 and **Oligopeptide-24** are peptides with a potent anti-ageing action, they take part in the normal development and healing of the skin, they reduce wrinkles by producing new skin cells and they enhance its elasticity by increasing collagen and elastin formation.

Decapeptide-4, as a tightening and anti-ageing peptide, enhances skin elasticity by increasing collagen and elastin production, it strengthens healing and it prevents-reduces wrinkles by activating new skin cell regeneration.

Oligopeptide-34 reduces the formation of melanin, the action of tyrosinase in melanocytes and the transfer of melanosomes to new keratinocytes.

Oligopeptide-51 'decolourises' freckles and spots, increases the levels of moisture and forms a uniform skin colour tone. In addition, Oligopeptide-34 & -51 act as 'boosters' enhancing the overall activity of the cocktail.

AA2G promotes collagen synthesis in fibroblasts, reduces wrinkles and suppresses melanin formation.

Vitamin PP (vitamin B complex) provides hydrating and soothing action and protects the skin's hydrolipid balance.

Panthenol has a repairing, hydrating, soothing and anti-inflammatory action.

DNA-RNA Complex contributes to skin hydration and regeneration.

Unimoist U-125 is a biotechnological ingredient containing saccharides and amino acids. Its capability to adjust pH and its hydrating properties are similar to skin NMF (Natural Moisturizing Factor).

Arginine is an amino acid that improves blood circulation, increases oxygen supply to tissues and accelerates the skin's regeneration rate.

BRIGHTENING

ACTION

Λάμψη, φωτεινότητα, ομοιομορφία χρωματικού τόνου

DESCRIPTION

A cocktail of active ingredients acting in synergy, in order to 'whiten' the skin and make its colour uniform.

The cocktail includes 3 biomimetic peptides (Oligopeptide-34, -51, -58), vitamin C (AA2G) and α -Arbutin.

Peptides act as messengers. This is accomplished by their binding to specific cell receptors, in order to provide the orders for the performance of processes.

Specifically, **Oligopeptide-34** reduces the formation of melanin, the action of tyrosinase in melanocytes, as well as the transfer of melanosomes to new keratinocytes.

Oligopeptide-51 'decolourises' freckles and spots, increases the levels of moisture and forms a uniform skin colour tone.

Oligopeptide-58 protects skin from the sun, reduces spots and uniformly 'whitens' the skin.

In addition, **Oligopeptide-34 & -51** act as 'boosters' enhancing the overall activity of the cocktail.

The action of the peptides is enhanced by the presence of **AA2G**, which contributes to the suppression of melanin formation in melanocytes, as it degrades the existing granules and inhibits the formation of new melanin granules to the skin.

Finally, **α -Arbutin** 'blocks' the biosynthesis of melanin in epidermis by inhibiting the enzymatic oxidation of Tyrosine & Dopa, offering uniformity of the skin colour tone and locally reducing freckles and spots.

Indications

Lack of skin colour tone uniformity, Hyper-pigmentation, age spots, photoageing, dull skin

Packaging

5 vials of 5 ml

DNA-RNA 10%

ACTION

Hydration, regeneration

DESCRIPTION

DNA-RNA Complex contains hydrolysed RNA and DNA segments of low molecular weight, known as nucleotides that fight skin dehydration.

At the same time, they significantly enhance the functional activity of skin cells by producing collagen and protecting the cell membrane from free radicals and oxidative stress.

DNA-RNA Complex contributes to skin hydration and regeneration.

Indications

Dehydrated, dull and rough skin, fine wrinkles

Packaging

5 vials of 5 ml

AMESON MESOTECH

FACE & BODY

DMAE 4%

ACTION

Tightening, 'lifting' effect

DESCRIPTION

It is a precursor molecule of acetylcholine, involved in the increase of muscle tone and biosynthesis of the skin cell membrane. Thus, the looseness of the skin is reduced, the elasticity is restored and its firmness is improved. It also has significant anti-oxidative properties.

Finally, **DMAE** acts as a carrier for the penetration of active ingredients, a feature that provides an advantage in mesotherapy protocols.

Indications

Loss of firmness and elasticity, looseness, wrinkles, stretch marks

Packaging

5 vials of 5 ml

BIOGENIC CAFFEINE 40%

ACTION

Lipolysis, reduction of cellulite, reduction of dark circles around the eyes, decongestion

DESCRIPTION

BIOGENIC CAFFEINE is a type of active, encapsulated caffeine in an oligomeric complex with natural bonds, free from the problem of crystallisation during the manufacturing process, that allows a high concentration of the active substance in the end product, without adding alcohol.

It has an excellent compatibility with the skin, it is absorbed very fast and, because it is alcohol free, it can be applied around the eyes.

It promotes the hydrolysis of triglycerides to free fatty acids and glycerol, reducing fat storages.

It decongests and controls fluid retention in the skin, an action that is related to fighting cellulite and reducing swelling around the eyes.

It improves blood circulation and reduces 'swelling' and dark circles around the eyes.

Indications

Local fat, cellulite, fluid retention, puffiness and dark circles around the eyes

Packaging

5 vials of 5 ml

SILICIUM 0.5%

Indications

Dehydration, loss of firmness, looseness, wrinkles and fine lines, puffy eyes, local fat

Packaging

10 vials of 7 ml

ACTION

Rejuvenation, tightening, remodelling, decongestion, carrier for the penetration of active ingredients, lipolysis

DESCRIPTION

Silicon (in the form of silanol) is a component of the skin and constitutes a portion of important macromolecules, such as elastin and collagen. Silicon interacts with the structural proteins and ensures skin architecture and integrity.

It increases and controls fibroblast proliferation by affecting the mitosis phase of the cell cycle. In this way, the regeneration of collagen fibres is enhanced, which increases elasticity and improves skin firmness.

It has anti-oxidative and hydrating action and concurrently causes nitric oxide secretion from the connective tissue cells, which stimulates lipolysis.

Silanol, also functions as a carrier for the penetration of active ingredients, a feature that offers an advantage to mesotherapy protocols.

AMESON MESOTECH BODY

ARTICHOKE 2.5%

ACTION

Decongestion, detoxication, anti-oxidation, cellulite treatment

DESCRIPTION

Natural artichoke extract, used for detoxication, it treats cellulite and swelling while it also acts as an antioxidant.

Artichoke is rich in Caffeoylquinic acids, polyphenols and inulin.

Caffeoylquinic acids tone up the lymphatic circulation promoting lymph drainage. Hence, swelling caused by fluid retention is reduced.

At the same time, **polyphenols** and **inulin** control fat storages in the body, affect their distribution in adipose tissue and stimulate the process of lipolysis.

Indications

Cellulite,
fluid retention,
local fat

Packaging

10 vials of 7 ml

FAT & CELLULITE

ACTION

Καταπολέμηση κυτταρίτιδας, λιπόλυση, αποτοξίνωση, σύσφιξη

DESCRIPTION

A cocktail of active ingredients acting in synergy against local fat, cellulite and looseness.

The cocktail includes Biogenic Caffeine, Artichoke, L-Carnitine and 4 biomimetic peptides (Oligopeptide-51, -61, Decapeptide-4, Tripeptide-41).

Biogenic caffeine promotes the hydrolysis of triglycerides to free fatty acids and glycerol, reducing fat storages.

The artichoke extract is used for detoxification, reduction of swelling and treatment of cellulite.

L-Carnitine is an amino acid that promotes the transfer of lipids from the cytoplasm into the mitochondria, where they are degraded to fatty acids, thus activating metabolism.

Tripeptide-41 inhibits the storage of fat in the adipose cells and promotes the process of lipolysis.

Decapeptide-4 and **Oligopeptide-61** enhance the elasticity and remodelling of the skin by increasing collagen and elastin production.

In addition, **Oligopeptide-41, -51 & -61** act as 'boosters' enhancing the overall activity of the cocktail.

Indications

Cellulite, fluid
retention, local fat,
loss of firmness
and elasticity

Packaging

5 vials of 5 ml

AMESON

CALMING BLISS & REPAIR GEL

CALMING BLISS

Indications

Intense irritation,
erythema, redness

Packaging

Tube 150 ml & 20ml

ACTION

Soothing, hydrating

DESCRIPTION

Calming Bliss is a product specifically designed for skin soothing in conditions of intense irritation.

It contains Allantoin, Bisabolol, Panthenol, Centella extract, Aloe Vera and Methyl Salicylate.

Allantoin is an ingredient with hydrating and healing action.

Bisabolol is a chamomile derivative with soothing and anti-inflammatory action.

Panthenol is converted to pantothenic acid (vitamin B5) during its contact with the skin, which hydrates tissues and contributes to the healing of wounds, stimulates the reconstitution of the epithelium and has anti-inflammatory properties.

Aloe Vera is a natural cocktail of vitamins, enzymes, amino acids and other substances that hydrates and helps to reduce skin irritations and warmth.

Centella extract is an ingredient used for its regenerative and anti-swelling action.

The action of Calming Bliss is enhanced by the **Methyl Salicylate** ingredient, a derivative of salicylic acid, which offers immediate and potent soothing action to the irritated skin.

REPAIR GEL

Indications

Irritated &
dehydrated skin

Packaging

Tube 150 ml

ACTION

Regeneration, rejuvenation, hydration

DESCRIPTION

Repair Gel is a product specifically designed to help rejuvenate the intensely irritated skin. It remodels, hydrates and revitalises. It contains Kelifluo 6250, Dermonectin, Pentavitin and Panthenol.

Kelifluo 6250, an ingredient with a potent regenerative action, creates a film on the surface of the skin, retaining its moisture and simultaneously protecting it under extreme conditions. It also reduces promptly and effectively skin redness and irritation.

Dermonectin is a precursor compound of fibronectin, that promotes the migration of epidermal cells towards wounded areas and fibroblasts. Consequently, it has the ability of healing wounds, it increases the mechanical strength of the skin, hydration and elasticity, while at the same time, wrinkles are reduced.

Pentavitin is a complex of carbohydrates with a composition similar to that of the horny layer. It binds with the amino groups of lysine that are present in keratin, leading to a potent, long-term hydration.

Panthenol is converted to pantothenic acid (vitamin B5) during its contact with the skin, which hydrates tissues and contributes to the healing of wounds, stimulates the reconstitution of the epithelium and has anti-inflammatory properties.

AMESON

DISCOVER OUR COMPLETE PROFESSIONAL SERIES

• *Juliette Armand*

AMESON series is a modern, comprehensive proposition in the area of aesthetic medicine. It includes three different product categories, all of which are characterised by their ease of use, immediate action, efficiency, expertise and hi-end technology.

AMESON Dermal Fillers

Medical devices of hyaluronic acid implants with novel technology, offering the scientific advantage of immediate result, expertise and hi-end technology.

AMESON Mesotech

Mesotherapy products fulfilling a wide range of needs for the face and body.

AMESON Mesopeel

Complete series of chemical peeling products, fulfilling the individual skin needs of each person.

AMESON series is completed with two **MESOTHERAPY AFTER** products. A strong combination of actions for prompt and better recuperation after applying mesotherapy and chemical peeling protocols, with the products **CALMING BLISS** and **REPAIR GEL** of the **AMESON** series.
